

The mid-range industrial applicator

After popular demand, we are pleased to re-introduce the Tec 810 hot melt applicator. The mid-range 12mm and 15mm tool, the Tec 810 improves on the technology present in the Tec 806, whilst maintaining the same quality and cost-effectiveness.

Featuring an upgraded cartridge heater along with a snap action thermostat, these components allow the Tec 810 to maintain a constant set temperature when in use. This helps to keep you working with no downtime waiting for adhesive to melt.

Additional features include an over moulded rubber handle and full-length hand trigger for a more comfortable grip and an interchangeable nozzle allowing you to choose the correct nozzle for your specific application.

Features and Benefits

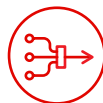

- **Upgraded heater** - The new cartridge heater maintains a set temperature when in use, enabling increased productivity.
- **Customisable Temperature** - Five different thermostat temperatures available from 130 to 215°C (customisable at point of order).
- **Full-hand trigger** - Easier to operate and reduces strain on the hand over extended periods of use.
- **Compact footprint** - Its small size allows the tool to fit into tight spaces for intricate bonding applications.
- **Increased output** - The 2kg per hour output is up to 20% better than the Tec 806.
