

Lightweight & Portable DIY Applicator

The highly anticipated replacement for the Tec 305, introducing the Tec 306. Keeping the same overall design and footprint as the previous model, the Tec 306 now features a removable cable for applications requiring more portability.

The industry standard IEC C7 lead can be detached mid-operation, enabling the user to operate the tool cordlessly for a short period of time whilst the heater is still at temperature.

The Tec 306 carries over the same reliability and easy-use features from the 305, including a full-hand trigger for a more comfortable grip, small form factor for hard-to-reach applications, and a removable base which doubles as a wrench for easy removal of the nozzle.

Features and Benefits

- **Detachable Cable** - The IEC C7 cable (figure of 8 cable) can be removed for easier portability and storage.
- **Fast Warm-up** - The tool reaches optimal operating temperature in under five minutes.
- **Full-hand trigger** - Easier to operate and reduces strain on the hand over extended periods of use.
- **Compact footprint** - Its small size and removable base allows the tool to fit into tight spaces for intricate bonding applications.
- **Lightweight Design** - The tool's low weight of 230g reduces fatigue and overexertion.
